Re: WELL ABANDONMENT MEMO

In the fall of 2010, David Wright requested the abandonment of monitoring wells at the Hooper Sands Road Site (the "Site") in South Berwick, Maine. Never having managed the site in the past, I conducted a file review to identify all wells requiring abandonment.

In mid-November 2010, I requested three estimates from contractors on our Retainer Contract List. East Coast Exploration of Hallowell, Maine had the lowest estimate and was selected to perform the work.

On December 17, 2010, letters were sent to residents in the area of the Site informing them of the well abandonment plan.

East Coast Exploration set an abandonment date for the summer of 2011 because of their current work load.

On May 3 and 11, 2011, John Lynam and I went to the Site and using GPS to navigate, located all wells that were intact. Wells were marked with flagging tape.

East Coast Exploration abandoned the wells September 6-9, 2011. Well abandonment logs are attached.
